

# Interim results from study of AccYouRate and Siena Hospital on wearable solutions for children with Rett syndrome

PRESS RELEASE 23/05/2023

Earlier AccYouRate released the interim results of its latest study focusing on pediatric disability. The study, which was coordinated by the University Hospital of Siena Hospital, and led by Dr. Claudio De Felice, explored the use of AccYouRate's wearable devices and Red Cross Italia caring services for the monitoring of children with Rett syndrome.

The results demonstrated that wearables technology can provide reliable and easily interpretable data to help determine the effects of therapies and care at home, which can then provide information for appropriate remedies. Monitoring during home-care periods is often influenced and can lead to inaccurate reporting, but wearable technology can help overcome these issues and provide more accurate data.

AccYouRate is the wholly owned subsidiary of SmartTee S.a.r.l., acquired by Crown Energy in February 2023.

Yoav Ben-Eli, CEO of Crown Energy:

*“Rett syndrome patients, even though a rare disease, represent part of a very large patient population including among others: neurodegenerative diseases and elderly and fragile populations that are not capable to properly convey their medical and personal status. In this study, AccYouRate has shown that their product can “give voice to these patients” by accurately measuring their vital signs and. telling the hospital.*

*This product can give hope to all these patients and their caregivers. This is a field where AccYouRate is at the forefront, and this is a very promising step allowing us to see numerous future commercial applications.”*
